

AI-ATM

Detect anomalous behaviours in the proximity of an ATM

AI-ATM is a video analytics app, based on the most advanced artificial vision algorithms, which allows to detect anomalous behaviour in the proximity of an ATM, either due to a person staying in front of the ATM for a long time or to the presence of too many people close to it.

The app requires the camera to be installed with a zenith view, but places no limits on the number of virtual sensors that can be defined within the framed scene, and can be used both in indoor and outdoor environments.

USE CASE

Where can we use AI-ATM?

AI-ATM is the ideal video analysis solution to meet the security needs of all banking institutions that need to protect their ATMs. It can be used both indoors [inside banks] and outdoors [for ATMs on the street].

More generally, the app can be used in all those contexts where it is necessary to protect a cash register column, such as: medicine dispensers in pharmacies, cigarette dispensers in tobacco shops, vending machines in gas stations.

ARCHITECTURE

Where can we install the app?

Edge

Embedded

Server

The detailed list of specific compatible platforms can be reached via the link on the right.

INTEGRATION

Where can we notify the events generated by the app?

Events can be sent to external servers using over 20 different mechanisms, which include third-party VMSs, standard protocols (such as HTTP, FTP, MODBUS and MQTT) and also A.I. Tech proprietary protocols, which allow the notification of events to the dashboards of A.I. Tech. More information via the link on the right.
