ai·masking

IT IS THE VIDEO ANALYSIS APPLICATION DESIGNED TO MEET SECURITY NEEDS WHILE RESPECTING THE PRIVACY OF INDIVIDUALS WITHIN THE MONITORED ENVIRONMENT.

AI-MASKING is a video analytics application designed to safeguard individual privacy by automatically and in real-time masking areas and objects within the camera's field of view. The solution enables **real-time masking of moving objects** (such as people, vehicles, etc.) by defining **static masking zones** within the scene. It is also possible to distinguish between masking areas and neutral zones, where masking is not applied.
AI-MASKING can be used in both **indoor and outdoor** environments and does not impose any limits on the number of masking zones.

ai·masking is the ideal solution for all contexts such as shops, shopping malls and supermarkets where **it is necessary to ensure the security of the personal information**, for example by displaying live camera feeds, while also protecting individuals' privacy by masking them in the exposed video.

At the same time, it is possible to record the unmasked video stream on an NVR or VMS, making it available for review if needed.

Furthermore, with AI-MASKING, it is possible to mask objects within the video stream captured by cameras installed in public areas (such as **public webcams**), allowing the footage to be publicly displayed online for citizens without requiring access credentials.
